

\_\_\_\_\_

Build a mini logbook in 3 minutes!

Follow the instructions and get a 30 writable pages logbook. You'll need a paper, a pair of scissors and a stapler. We suggest a laser printing, it won't drip with the humidity.

With a scale > 140% the output can be too big for some staplers or come out of the printing borders. The version with lines (pages 2, 3) requires double sided printing.

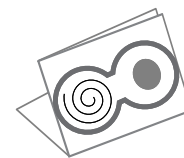

1

Cut along the dashed line. By modifying the printing scale you can change the logbook size.

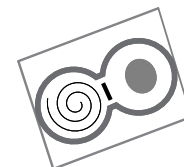

2

Fold the paper in two parts along the long side. Repeat other 2 times. 3 foldings in total.

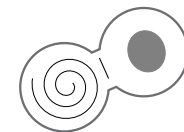

3

With the stapler put one staple. Make sure to center the sign, help yourself using the line on the back side.

4

Cut the grey borders. Don't fold before cutting.

5

Fold into two and get your logbook!  
If you want you can finish off the cuttings.  
Customize your logbook.  
With large transparent duct tape you can coat the cover
